

Improving Townscape in the city of Shiraz

Written by: **Razieh Rezazadeh** ▼

Abstract:

During the preparation of a re-organization plan, not only the physical and visual qualities of the environment should be considered, but the perception of the environment should also be taken into account. There are two approaches in this regard, topologic and ecologic studies. Ecologic studies or the perception of the environment approach is based on the theoretical experiences gained from systematic researches.

The comprehensive re-organization plans of Shiraz cityscape have emphasized both the physical and perceptive aspects of the environment. This article basically stresses the implementation control means. The other sections of the study especially the perception of the environment is only briefly presented. In this plan according to the physical characteristics, special axis or zones, various policies are recommended and adopted.
